DocSynergy™

Electronic Medical Record: EMR Services provided through a secure online portal designed to store all patient records in electronic format. Complete health record with:

- | | |
|---|--|
| <i>Patient demographics</i> | <i>Problem lists</i> |
| <i>Allergies lists</i> | <i>Medication lists with Formularies</i> |
| <i>Lab results order entry</i> | <i>Online Consults and Referrals</i> |
| <i>Clinical documentation</i> | <i>Structured secure communications</i> |
| <i>Standards Based: Sno-MED, ICD9, CPTs and HL7</i> | |

Online Referrals: Allows patient referrals to be tracked through the referral process, with customer defined decision-points guiding the disposition of patients. This paperless process can help you reduce the time to treatment by taking advantage of instantaneous communication of electronic charts and records.

Online Consultation and Triage: DOC personnel may request advice and consult with one another on patient care. Patient charts may also be forwarded to external Specialists for a specialty consultation and triage. Typically the specialist disposition results in shorter time to treatment, fewer clinic visits and transports, and more efficient use of each clinic visit.

Management Reports: Utilization and Quality of Care reports that can help show if your healthcare system is operating effectively or assist you in making decisions to drive change.

Integration: Integrate with 3rd party Lab and Pharmacy providers and eliminate the overhead and inefficiencies in order management.

Secure and HIPAA Compliant:

- 128-bit encryption for all interactions
- Secure, centralized repository for data
- Automatic checking and verification of security PRIOR to each use at each desktop
- Comprehensive permissions structure allows tight control without onerous difficulties for users
- Auto-log outs for abandoned work-stations
